Section 1

MAIN IDEAS

- 1. Culture is the set of beliefs, goals, and practices that a group of people share.
- 2. The world includes many different culture groups.
- 3. New ideas and events lead to changes in culture.

Key Terms

culture the set of beliefs, values, and practices a group of people have in common culture trait an activity or behavior in which people often take part culture region an area in which people have many shared culture traits ethnic group a group of people who share a common culture and ancestry cultural diversity having a variety of cultures in the same area cultural diffusion the spread of culture traits from one region to another

Section Summary

WHAT IS CULTURE?

Culture is the set of beliefs, values, and practices a group of people have in common. Everything in day-to-day life is part of culture, including language, religion, clothes, music, and foods. People everywhere share certain basic cultural features, such as forming a government, educating children, and creating art or music. However, people practice these things in different ways, making each culture unique.

Culture traits are activities or behaviors in which people often take part, such as language and popular sports. People share some culture traits, but not others. For example, people eat using forks, chopsticks, or their fingers in different areas.

CULTURE GROUPS

There are thousands of different cultures in the world. People who share a culture are part of a culture group that may be based on things like age or religion.

	parts of cu	itare.

	•		

Name	Class	Date
Section 1, continued		

A **culture region** is an area in which people have many shared culture traits such as language, religion, or lifestyle. One large culture region is the Arab world in Southwest Asia and North Africa. A country may have several different culture regions, or just a single region, such as Japan.

A culture region may be based on an **ethnic group**, a group of people who share the same religion, traditions, language, or foods. **Cultural diversity** is having a variety of cultures in the same area. It can create a variety of ideas and practices, but it can also lead to conflict.

CHANGES IN CULTURE

Cultures are constantly changing. They can change through the development of new ideas or contact with other societies. New ideas such as the development of electricity, motion pictures, and the Internet have changed what people do and how they communicate. When two cultures come in close contact, both usually change. For example, the Spanish and Native American cultures changed when the Spanish conquered the Americas.

Cultural diffusion is the spread of culture traits from one part of the world to another. It can happen when people move and bring their culture with them. New ideas and customs, such as baseball or clothing styles, can spread from one place to another as people learn about them.

How can cultural diversity affect the people in an area?

Section 2

MAIN IDEAS

- 1. The study of population patterns helps geographers learn about the world.
- 2. Population statistics and trends are important measures of population change.

Key Terms

population the total number of people in a given area
population density a measure of the number of people living in an area, usually expressed as persons per square mile or square kilometer
birthrate the annual number of births per 1,000 people
migration the process of moving from one place to live in another

Section Summary

POPULATION PATTERNS

Population is the total number of people in a given area. Geographers study population patterns to learn about the world.

Some places are crowded with people, while others are almost empty. **Population density** is a measure of the number of people living in an area, usually expressed as persons per square mile or square kilometer. It describes how crowded a place is, which in turn affects how people live. In places with a high density, there is little open space, buildings are taller, and roads are more crowded than places with lower density. They also often have more products available for a variety of shoppers.

High density areas often have fertile soil, available water, and a favorable climate for agriculture. Areas that are less dense often have harsh land or climate that makes survival harder.

POPULATION CHANGE

The number of people living in an area affects jobs, housing, schools, medical care, available food, and many other things. Geographers study population

Section 3

MAIN IDEAS

- 1. The governments of the world include democracy, monarchy, dictatorship, and communism.
- 2. Different economic activities and systems exist throughout the world.
- **3.** Geographers group the countries of the world based on their level of economic development.

Key Terms

democracy a form of government in which the people elect leaders and rule by majority

communism a political system in which the government owns all property and dominates all aspects of life in the country

market economy a system based on private ownership, free trade, and competition **command economy** a system in which the central government makes all economic decisions

gross domestic product (GDP) the value of all goods and services produced within a country in a single year

developed countries countries with strong economies and a high quality of life **developing countries** countries with less productive economies and a lower quality of life

Section Summary

GOVERNMENTS OF THE WORLD

People form governments to make laws, regulate business, and provide aid to people. A **democracy** is a form of government in which the people elect leaders and rule by majority. Most democracies protect people's rights to freedom of speech, religion, and a free press.

Monarchies are ruled directly by a king or queen who holds all the power. Dictatorships are also ruled by a single person. Dictators hold all the power and often rule by force. **Communism** is a system in which the government owns all property and dominates all aspects of life in the country. In most Communist states, the people have restricted rights and little freedom.

MAIN IDEAS

- 1. Globalization links the world's countries together through culture and trade.
- 2. The world community works together to solve global conflicts and crises.

Key Terms

globalization the process in which countries are increasingly linked to each other through culture and trade

popular culture culture traits that are well known and widely accepted

interdependence the reliance of one country on the resources, goods, or services of another country

United Nations (UN) an organization of the world's countries that promotes peace and security around the globe

humanitarian aid assistance to people in distress

Section Summary

GLOBALIZATION

People around the world are more closely linked than ever before. **Globalization** is the process in which countries are increasingly linked to each other through culture and trade. Improvements in technology and communication have increased globalization.

Popular culture consists of culture traits that are well known and widely accepted. These traits can include food, sports, music, and movies. The United States has a great influence on popular culture through sales of American products and the use of English for business, science, and education around the world. It is also greatly influenced by other countries.

World businesses are connected through trade. Companies may make products in many different countries or use products from around the world. **Interdependence** occurs when countries depend on each other for resources, goods, or services.

Inderline the sentence which	
lescribes two ways countries
